versus Jan to July 2017

58

Source: NC DETECT: ED: Syndrome: Overdose: Opioid Overdose (ICD-9/10-CM)

### Opioid Overdose ED Visits by Race

**NOTE:** The North Carolina Disease Event Tracking and Epidemiologic Collection Tool (NC DETECT) is North Carolina's statewide syndromic surveillance system. ED visit data from NC DETECT are provisional and should not be considered final.

Counts based on diagnosis (ICD-9/10-CM code) of an opioid overdose of any intent (accidental, intentional, assault, and undetermined) for North Carolina residents. Opioid overdose cases include poisonings with opium, heroin, opioids, methadone, and other synthetic narcotics.

There may be data quality issues affecting our counts: counties with <10 cases may not be true lack of opioid overdose cases but data quality issues; additionally, some hospitals use non-specific poisoning codes rather than specific opioid poisoning codes.
